Potato Amusement

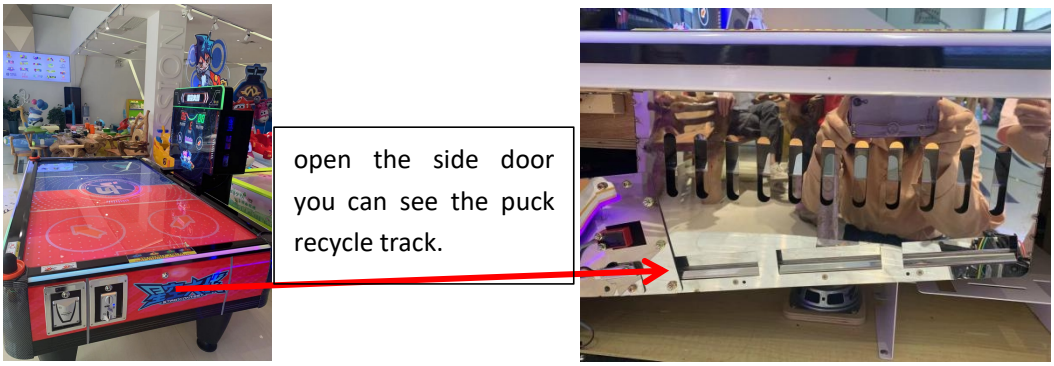

Pucks out tract

Pucks out tract

1, Game start,then the mainboard will send the signal to the pucks box. Pucks will be push up to the top of the track, and will be natural balance auto-out from left or right side, don’t need any assist. Natural balance auto-out from left or right side without any outside intervention is reduce the stuck of mechanical parts.

2, Other small impurities will be leaked out through the cracks in the track when pucks in that can reduce the problem of impurities stuck.

3, There is the puck recycle track inside the body of table, pucks will be recycle when players goal.
4, Our recycle track is very straight, there are not too much bend, so that the pucks will be recycle smoothly. And the recycle track is made of stainless steel, it won't get stuck because of rust.

5, The most important technician of our machine is the reversal function. If the pucks are stucked and there are no pucks out after 3s when the machine is working, the reversal function will be start to restart the auto-out signal so that the pucks will be fall down into the pucks box then restart to push up the pucks to the top of track. That can ensure the pucks will be auto-out smoothly and no human intervention is required.

6, The overall structure and design of our machine are not complicated and with good quality material and with very stander production, that's the main reason why we can guarantee very few failures.
